MID-SUMMER CATALOG

July and August—24th Edition

THE IDEAL STRAWBERRY SENATOR DUNLAP (Perfect)

It ripens early and continues in bearing a long while. In favorable growing weather it retains its size up to the end of the season. The color is beautiful, the berry large and solid and its cropping qualities are unsurpassed. You will be safe in counting on this variety as a producer of the best strawberry crop you ever harvested.

PRICE: Pot-Grown Plants, 75c. per dozen; per 100, \$5.00; \$40.00 per 1000.

Henry F. Michell Company endeavor to send out only the very best quality of Seeds, Bulbs and Plants, but cannot guarantee results or crops. If customers do not accept these goods on the above conditions, they can be returned to us within ten days.

MICHELL'S ^{POT GROWN} STRAWBERRY PLANTS

EXTRA SELECTED STOCK—Strong and Well Rooted. Will Yield a Full Crop of Berries Next Season. Ready About August 15th.

The time of shipment is from about August 15th to October 1st. The advantages in planting pot-grown strawberry plants are realized by a full crop of berries the following year. Our plants are carefully grown in clay pots and, prior to shipment, are transferred with the original ball of earth at their roots to substantial paper pots in which they are forwarded, thus insuring the buyer getting them in first-class order and reducing the transportation charges about 25 per cent.

It is Advisable to Send Strawberry Plants by Express Only, as They Cannot be Successfully Shipped by Mail, and by Freight the Risk of Delay is too Great. Plants Take a Special Low Express Rate.

Layer Plants of Strawberries may be obtained about October 1st. Layer plants will yield a moderate crop of berries the season following, and are recommended (because of their low cost) where one has a very large number to plant.

Note—Some varieties which are marked P. are pistillate (or imperfect flowering), and while they embrace often the best kinds, it will be necessary in order to get fruit to plant bisexual (or perfect) flowering sorts near them. About five imperfect to one perfect flowering is the general rule.

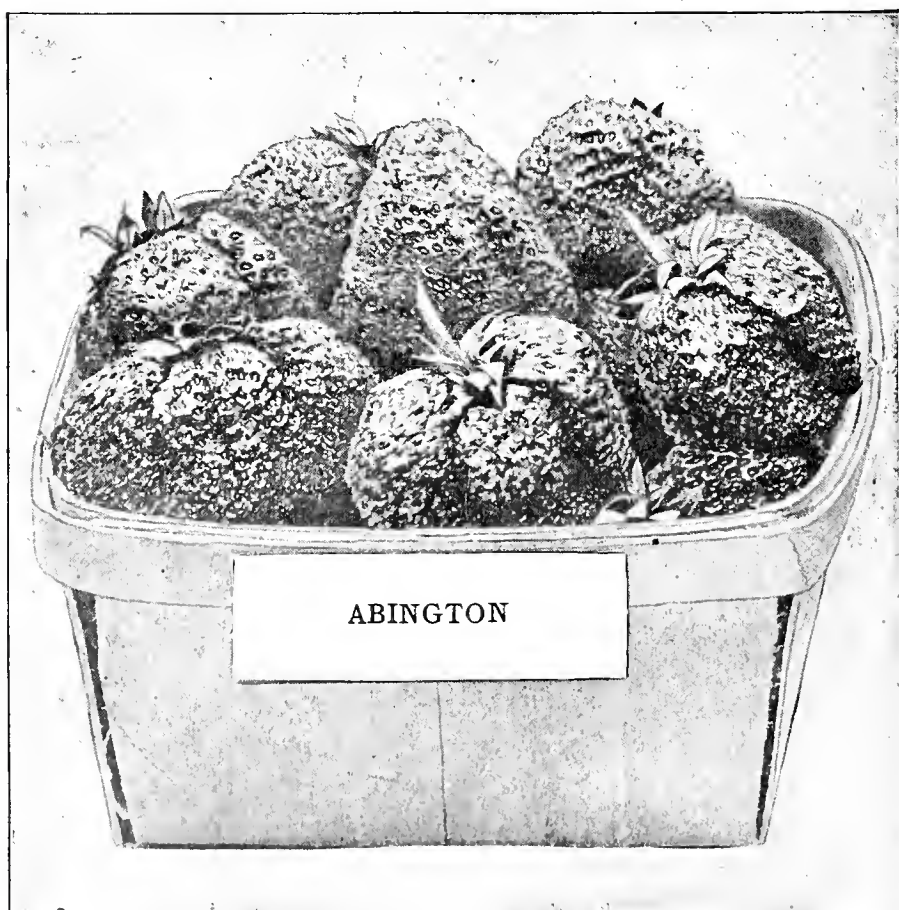

AUTUMN OR EVERBEARING STRAWBERRIES

This type, while producing its main crop of berries with the general sorts, continues uninterruptedly to mature its fruit, until checked by hard frosts; it has actually been known to bear strawberries until Christmas, when the weather is open and mild. The three varieties, listed below, are best adapted for the American climate and soil conditions. We are confident that they will give entire satisfaction and should be included in every collection of Strawberries. In order to get the greatest crop of berries late, it is recommended to take off the blossoms, as they appear, until the middle of July, after which time they should not be disturbed in this respect. Cultivate liberally and give them plenty of water when the weather is excessively dry. The ground in which these are to grow, should be well enriched, especially with well rotted cow manure. Any special attention that is given this type will be well rewarded with a good crop in September and October.

AMERICUS—A heart-shaped fruit, pinkish red. The fruit stems are very strong, holding the berries well off the ground. \$1.00 per dozen; per 100, \$6.00.

PROGRESSIVE—A recent introduction, considered the largest in size and of extreme producing qualities. \$1.25 per dozen; per 100, \$7.00.

SUPERB—Rich dark red of very even rounded form, medium size, early, fine flavor. \$1.00 per dozen; per 100, \$6.00.

EARLY VARIETIES

ABINGTON (Perfect)—A strong, vigorous grower, with rich, dark green leaves. Perfect blossom and is quite large, twenty-five berries often filling a quart box. In color it is bright red, with firm flesh and good flavor. We have flattering reports concerning this variety from different sections of the country, and we consider it one of the best of the early sorts.

70c per doz.; per 100, \$4.00; \$37.50 per 1000.

CHIPMAN (Perfect)—This variety originated in Sussex Co., Del., by a grower of over thirty years' experience, and is considered by him the best he ever fruited. The plants are strong, upright in growth, large and healthy, with tall, broad, bright, glossy green foliage, which has never shown any sign of rust or disease. The fruit is large. It begins to ripen four or five days earlier than the Bubach, and being very firm and retaining its glossy red color well after taking from the plants, (all combined) makes it a valuable market variety. It succeeds on both light and heavy soil. The reports we have had from it have all been good.

70c per doz.; per 100, \$4.00; \$37.50 per 1000.

SENATOR DUNLAP (Perfect)—See front cover page. This grand Strawberry will please the most critical person. One of the first to yield and continues well into the height of the season. It can not be recommended too highly.

75c per doz.; per 100, \$5.00; \$40.00 per 1000.

SUCCESS (Perfect)—This wonderful berry is all that its name implies; it is a success from start to finish. Very vigorous grower, large fruit of high color and firmness, regular shape and a wonder in productiveness. Begins to ripen early and continues several weeks; retaining its large size all season.

60c per doz.; per 100, \$3.50; \$30.00 per 1000.

Prices of layer plants, extra strong, except where noted, ready in October. 25c. per doz. (by mail 35c); per 100, \$1.25 (by mail \$1.50); \$7.50 per 1000 by express *not prepaid*.

Orders can be booked now for layer plants for shipment in October.

SPECIAL NOTE

There are many more varieties of Strawberries besides those offered in this catalog; there is, however, none better; this we have proven by actual test. If you follow our list you can select the best there is.

MICHELL'S PURE BONE MEAL—For perfect fruit of large size and plenty of it apply a teaspoonful around each Strawberry plant after planting.

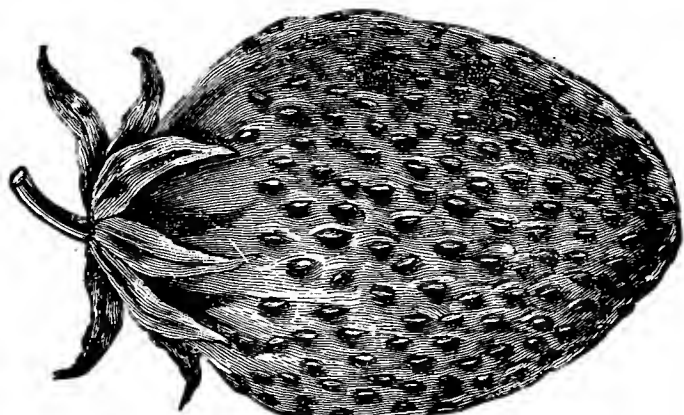

25 lbs. 75c; \$1.25 per 50 lbs.; 100 lbs. \$2.00; \$3.75 per 200-lb. bag; \$33.00 per ton.

MID-SEASON VARIETIES

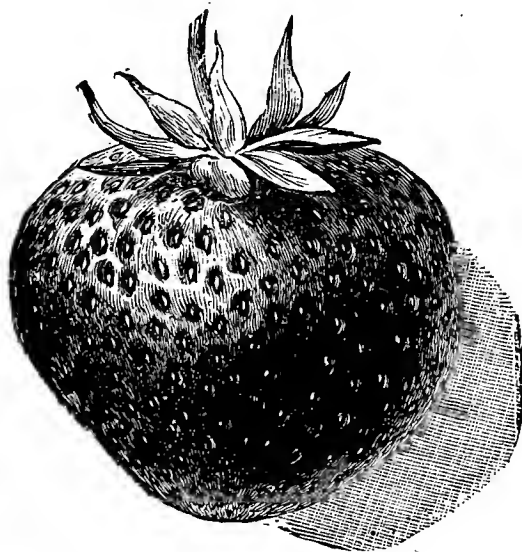

"Auto"

Auto (Perfect). A bush-like plant, which makes but few runners, with many strong fruiting crowns. This makes it admirably suited for hill culture or narrow matted rows. Very productive; extra large, bright red, conical berries of high quality.

Bubach (Pistillate). One of the best known berries in the Philadelphia markets, growers in this vicinity considering it the most profitable variety and no mistake will be made in planting it extensively for home use; an old favorite.

Marshall (Perfect). This berry is claimed to have but one fault, and that is its inability to hold up the immense trusses of berries it produces. It is large, very firm and of the best quality. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Chipman. For prices and description see opposite page.

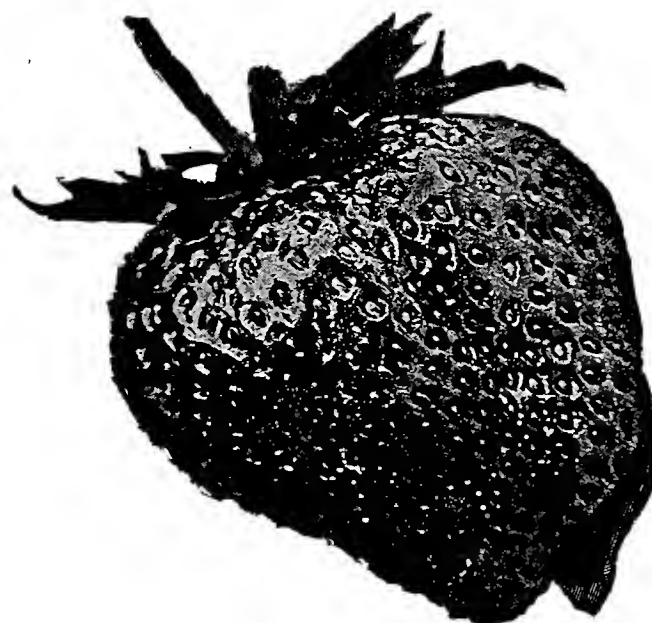

Cardinal

Cardinal. (Perfect). A remarkable strawberry and well named. Indeed, it is such a remarkable variety that the National Department of Agriculture illustrated it in colors in the Year Book and described it as follows: "After several years of observation of its behavior, the originator secured plants of forty leading varieties and planted a trial bed for comparison, in which the 'Cardinal' was found by capable judges, in 1903, to surpass them all in vigor, productiveness and other important market qualities. Form roundish or roundish conical, occasionally slightly compressed; size, large; flesh firm and solid." 80c. per doz.; per 100, \$5.00; \$40.00 per 1000.

Heritage (Perfect). This is truly a giant strawberry, it being almost impossible to put a whole berry at a time in one's mouth. It is rather irregularly shaped but of a beautiful crimson color. The plants and foliage are entirely distinct which makes it stand out above all other sorts. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Nick Ohmer (Perfect). M. Crawford, the originator, reports it as follows: "After watching Nick Ohmer for years, and never having received one unfavorable report on it, I am confident that it is one of the most desirable, if not the very best strawberry ever sent out. There is no other in the market, or in sight, that I would plant with so much confidence. If restricted to a single variety, it would be my first choice, without a moment's hesitation." The fruit is of the very largest size—a giant among strawberries. One of the best berries for forcing under glass in winter. Color, a bright red; a heavy cropper.

President (Pistillate). A most remarkable variety. For large size, beauty, great productiveness and high quality, united in a single variety, it is without an equal, it is simply superb. The plant is of mammoth size, and with ordinary culture the huge berries are literally heaped along the row. 70c. per doz.; per 100, \$4.00; \$35.00 per 1000.

"Wm. Belt"

William Belt (Perfect). A grand mid-season sort. This variety was introduced some eight or ten years ago and at the time was lauded very highly and many plants were sold. The *superb quality, the equal of which has not yet been attained in any other medium late variety*, makes it very popular for the home garden and local market.

Prices of any of the *Pot-Grown Strawberries* offered on this page (except where noted): 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Extra Strong Layer Plants of Strawberries *ready after Oct. 1st.*

Prices: 25c. per doz. (by mail 35c.); per 100, \$1.25 (by mail \$1.50); \$7.50 per 1000, by express not prepaid. *Orders can be booked now.*

MICHELL'S POT GROWN STRAWBERRY PLANTS

LATE SEASON VARIETIES

See Special Cultural
Note on Page 3

Brandywine (Perfect). The finest of all late fruiting sorts; it has not a single defect. Plants of extra strong constitution and growth, doing well everywhere. Fruit extra large, heart-shaped. color bright, rich red.

Norwood (Perfect). A very fine variety for either home or market use; it is firm, large, and a great producer. 80c. per doz.; per 100, \$5.00; \$40.00 per 1000.

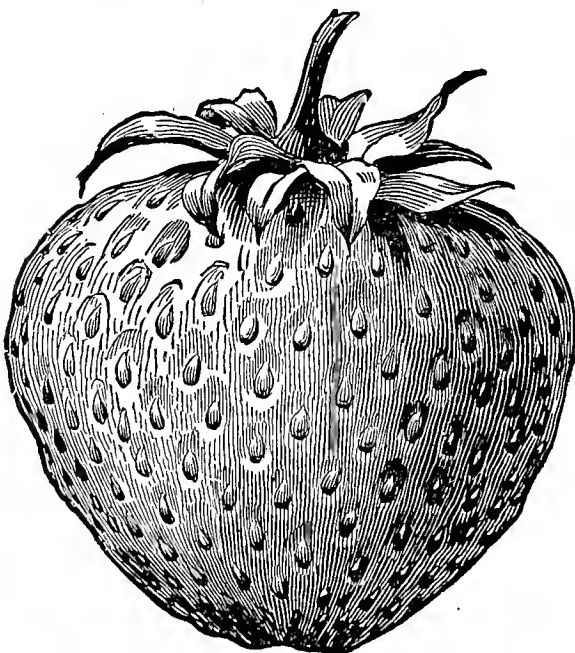

New Home (Perfect). As late and large as Gandy. Fruit a bright red color that does not lose its lustre. It does not turn dark for a long time after being picked; uniform large size and the best shipping and keeping berry grown; vigorous grower. It will produce a large crop on either high or low land; the fruit is so firm, and keeping quality so excellent, it does not need to be picked oftener than three times a week, when it will usually make 1000 quarts or more per acre at each picking during the height of the season. It has been claimed one could pick forty quarts or more per hour, and one man declared that he picked twenty quarts in twenty minutes. 70c. per doz.; per 100, \$4.00; \$37.50 per 1000.

Superior. Originated in Delaware. This variety is quite popular in some sections. The plants are strong, healthy growers, with dark glossy, green foliage, which succeed on almost any soil and is immensely productive of small to medium berries, which are firm and good keepers. Ripen about a week after Excelsior and continue to bear until late in the season.

Sample (Pistillate). One of the most popular varieties ever introduced. It is one of the very best pistillate kinds in cultivation. The plant is large and healthy, and makes plenty of runners. It is a great bearer of large, roundish berries, dark red to the centre, moderately firm, and of good quality. The fruit is large to the close of the season.

Prices of any of the *Pot-Grown Strawberries* offered on this page (except where noted): 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Extra Strong Layer Plants of Strawberries *ready after Oct. 1st.*
Prices: 25c. per doz. (by mail 35c.); per 100, \$1.25 (by mail \$1.50); \$7.50 per 1000, by express not prepaid. *Orders can be booked now.*

Gandy

Gandy (Perfect). This variety is known to most every berry grower as one of the best late sorts. It is very solid and large, of a beautiful crimson color; especially good for family garden planting.

Glen Mary (Pistillate). One of the best of the older varieties as it still keeps its place among the prominent strawberries. The fruit is very large but rather irregular, somewhat like Sharpless. It is a great drought resister, ripening a full crop of luscious berries in the driest weather.

MICHELL'S PURE BONE MEAL

An excellent fertilizer to use when planting strawberries; about a teaspoonful to a plant. 25 lbs., 75c.; \$1.25 per 50 lbs.; 100 lbs., \$2.00; \$3.75 per 200 lbs.

MICHELL'S POT GROWN STRAWBERRY PLANTS 3

A husky developed specimen like this can't fail but give you satisfaction

Haverland (Perfect). One of the most popular varieties which was introduced in a modest way some thirty years ago. It bears a big crop of berries that are above medium in size, quality and appearance. Any one who is in doubt as to what to plant would make no mistake in planting this. It seems to do well in nearly every part of the country.

Sharpless (Perfect). One of the old timers, but with so much merit it is impossible to discard it. It is a mid-season variety and, while irregular in shape, is very large and a tremendous cropper. A good sort for the family garden.

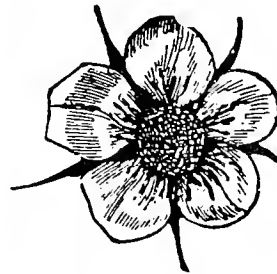

Stevens' Late Champion (Perfect). This variety received unstinted praise at the last yearly meeting of the New Jersey Horticultural Society. In that section it is rapidly forging its way to the front, superseding the old and popular Gandy. The originator describes it as follows: "Very large, fine flavored, bright color, good shipper, heavy yielder, good fruit stem." This berry has averaged 7,556 quarts per acre, netting \$666.96 per acre. It has sold as high as 22 cents per quart. It has been tested on all kinds of soils and will grow successfully where any strawberry will grow. It will stand a drought better than any other berry ever grown in this section. It has never shown any sign of rust. The cap, which is double, has always kept green until the last of the season. 80c. per doz.; per 100, \$5.00; \$40.00 1000.

Prices of any of the *Pot-Grown Strawberries* offered on this page (except where noted): **60c. per doz.; per 100, \$3.50; \$30.00 per 1000.**

CULTURAL NOTE ON STRAWBERRIES

Strawberries delight in good, rich soil, that has had plenty of manure added to it. The plants should be set 12 to 15 inches apart, in rows 2 feet apart. A row 100 feet long requires approximately 75 to 100 plants or about 14,500 per acre. If the weather is dry, when planting, water well at the time and for a few days thereafter, if it is possible. Press the soil well around the ball, when planting, and keep the soil well cultivated, cutting off all runners that may form. At the approach of permanent winter it pays to cover the entire bed to a depth of 2 inches with clean straw or salt hay. This protects the plants during severe weather. Do not use leaves, as they hold the moisture and cause damage to the plants in winter. At the approach of spring, rake the covering from the plants proper and leave it between the rows; this will serve as a mulch during the summer, protect against drought, and also keeps the fruit more free from sand, at the same time to a large measure controls the growth of weeds. In planting Strawberries, keep in mind that there are perfect and imperfect or pistillate flowering kinds. The first type of blossom is shown by cut No. 1 below; the pistillate type by cut No. 2. The perfect flowering produce freely alone, while the pistillate

No. 1

No. 2

sorts require hybridizing with the pollen, which is generally accomplished by bees. Pistillate sorts embrace some of the finest varieties, but in planting them, every fourth or fifth plant should be of a perfect flowering type to insure an abundance of fruit.

EXTRA STRONG CELERY PLANTS

(READY ABOUT JULY 10)

These plants are grown from our own seed at our "Evergreen" Seed Gardens. We have immense quantities and can fill orders for any number.

A WORD ON CELERY CULTURE.—Celery delights in a good, rich, moist soil. Locations where the soil may become dry should be avoided. Nothing is more beneficial or so little work as the watering of celery during periods of drought. After it has been transplanted and made some growth, the plants should be set in permanent rows 6 to 8 inches apart in the row. Many private gardeners prefer to use the two-row system of trenches; it will be found very advantageous to work. If the idea of the market gardener is carried out, the celery is planted in single rows about 2 feet apart, 6 or 8 inches apart in the row. By the former method the celery is usually banked up to blanch until almost entirely covered with soil; the top is then covered with leaves or other litter as winter approaches. In the single-row system the celery is banked up gradually to blanch, and after this process is over, at the approach of winter it is dug up and laid in shallow trenches after being cleaned. Storing for winter is done by covering it with waterproof celery paper and topping off with soil or leaves. The celery may thus be gotten out for market during the severest weather. Good cultivation is highly necessary during the growing period.

Boston Market. An elegant dwarf sort, a good winter keeper, fine taste, crisp and nutty.

Dwarf Golden Heart. The best of the half-dwarf varieties; stalks large and full; the heart is golden yellow, turning to a light color when blanched.

Far Superior. Our own introduction. Offered by us exclusively in plants. This is the finest winter celery in existence. Rich flavor, very nutty.

French Golden Self-Blanching. An early sort. The heart is a rich golden-yellow, with light yellowish-green outer leaves. 60c. per 100; 500 for \$2.75; \$5.00 per 1000.

Giant Pascal. The best for late winter and early spring use; remaining in condition for use the longest of any.

Perfection Heartwell. This is one of the best late varieties in cultivation.

Pink Plume. The red sorts surpass the white in flavor, and possess in their coloring a feature which renders them valuable as a table ornament. (Supplied on order only.)

White Plume. The White Plume is unsurpassed for fall and early winter use, requiring very little earthing to blanch it.

Winter Queen. This variety grows a very thick, solid and heavy stalk, and has a large heart. It is a close, compact grower, and when blanched is a creamy-white color.

Prices: (Except where noted) 50c. per 100 (by mail 65c.); 500 for \$2.25, by express not prepaid; \$4.00 per 1000, by express not prepaid.

10 MICHELL'S SUPERB POT-GROWN ROSES FOR SUMMER PLANTING

We recommend Summer planting of Roses very highly, as by planting then, a full season's growth is gained. If conditions are favorable, these Roses, especially the Hybrid Tea varieties, will flower at once and during the fall until frost time.

The Roses, which we supply at present, are extra strong 2-year-old plants in 6-inch pots, and, with a little attention and care will give splendid results.

Hybrid Tea Rose Caroline Testout

EVERBLOOMING HYBRID TEA VARIETIES

With proper care these will flower uninterruptedly and profusely from June until frost. While generally hardy, we recommend a covering of old long manure, leaves or straw during the winter.

Caroline Testout. Very fragrant and free-flowering; large flowers of bright pink. One of the most popular varieties.

Dean Hole. One of the best for midsummer. The color is very attractive, being deep salmon pink.

Florence Pemberton. Exquisite shape; very double; of a creamy white, suffused with pink.

General McArthur. The best deep scarlet Rose in existence. Delightful, fragrant and exceptionally free-bloomer.

Geo. Dickson (New). Undoubtedly the finest novelty in Roses of recent years. The color is a velvety black crimson, heavily veined with deep pure crimson maroon. It has wonderful lasting qualities and we are convinced this variety will be the most popular Exhibition Rose in existence. \$1.50 each.

The Lyon. Very attractive variety of a beautiful orange yellow color. The flowers are immense in size and are cup shaped.

Maman Cochet. One of the most popular Roses in the vicinity of Philadelphia. As a cut flower it is unsurpassed; the individual large flowers borne on stems often 2 feet long. The color is a Bridesmaid Pink.

Souvenir de Pierre Notting. A splendid free-blooming sort. The color is an apricot yellow, blended a copper shade.

Wm. Shean. Delicate pink; free bloomer.

HYBRID PERPETUAL SORTS

All roses offered by us are *extra strong 2-year-old, extra selected for size and shape* and furnished by us from large pots. Hybrid Perpetual Roses produce their main crop in June and frequently some good flowers in the fall.

Baroness Rothschild. Soft delicate pink, very large.

Captain Christy. Delicate flesh pink, very free.

Magna Charta. One of the largest; color deep pink.

Mrs. John Laing. Soft pink, very fragrant and large.

Mrs. R. G. Sharman Crawford. The finest light pink rose.

Paul Neyron. The largest of all roses, deep rose.

General Jacqueminot. The old favorite; velvety crimson flowers.

Ulrich Brunner. Bright cherry red, flowers large and full.

Frau Karl Druschki. An exquisite flower of the purest white.

Margaret Dickson. A very large, pure white; the best of its color in the Hybrid Perpetual class.

CLIMBING ROSES

American Pillar. Single large flowers of a rich shade of pink.

Baltimore Belle. An old favorite. Blush pink flowers.

Christine Wright. A perfect flower of a delicate pink shade.

Continuous bloomer. 75c. each; \$7.50 dozen.

Crimson Rambler. The well known favorite.

Dorothy Perkins (Pink). Pink flowers in long sprays.

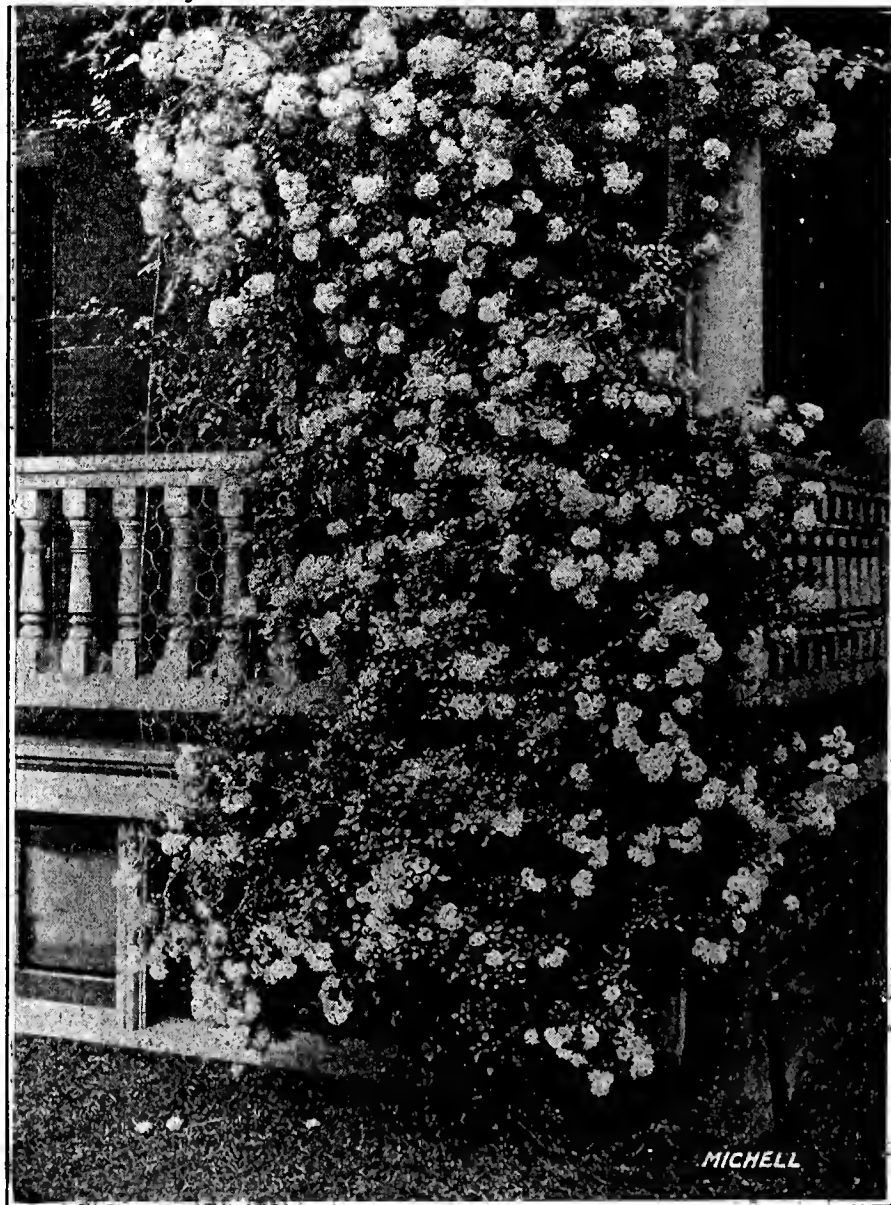

Dorothy Perkins (White). Same as above except color.

Excelsa. An improvement on the Crimson Rambler. Very free-flowering. 75c. each; \$7.50 dozen.

Flower of Fairfield. The ever-blooming Crimson Rambler. 75c. each; \$7.50 dozen.

Hiawatha. Single, brilliant scarlet. Very effective.

Tausendschön. Soft pink. For pergolas or as a pillar rose this variety is unexcelled.

Climbing Rose Excelsa

Any Roses on this Page, except where noted (extra strong plants), 50c. each; \$5.00 dozen; \$35.00 per 100.

MICHELL'S DISTINCTIVE FLOWER SEEDS

FOR SUMMER AND EARLY FALL SOWING

For Complete List of Flower Seeds see our General Catalogue for 1914

For the convenience of our customers, and to facilitate the filling of orders, we have affixed numbers to all varieties of Flower Seeds, and in ordering it is only necessary to give the quantity wanted and the number; but care should be taken to give the correct number, as a mistake in this would result in getting the wrong variety.

Pansy—Michell's Giant Exhibition

Seed sown in frames during July and August and transplanted later gives us the main crop of flowers the following spring. Pansies thrive best in moist semi-shady situations.

MICHELL'S GIANT PANSIES

SEPARATE COLORS

A strain secured from the leading Pansy specialists, and not to be compared with the ordinary Giant Trimardeau, as the flowers are of much heavier texture.

MUSHROOM SPAWN

Mushrooms are within the reach of any one who has a greenhouse or a cellar. A crop is produced with good spawn, a little care and patience in about 4 to 6 weeks, and continues in bearing about two months. New beds can be started at intervals which will give a supply the entire season. The first planting can be made in July, the last in March. Ask for our Free Booklet on Mushroom Culture, which also describes, further, these different spawns.

Private Strain Improved Purple Top White Globe Turnip

BRANDYWINE PURE CULTURE SPAWN

This is an entirely new strain originating in the section of Pennsylvania that supplies the New York and Eastern markets with mushrooms. It appears to be especially full of life and we can recommend it as an early and prolific producer; mushrooms are uniform and almost pure white in color.

LAMBERT'S AMERICAN PURE CULTURE SPAWN

This type produces larger mushrooms than the English, coming into bearing somewhat earlier, and continuing to crop for a long time. This spawn is produced by selecting spores from individual specimen mushrooms and is propagated and transferred to the bricks of manure, which, when planted, produce mushrooms all of one type.

This strain is the earliest and produces a greater quantity than the "Standard" variety, which we have discarded.

MIXTURES FOR PLEASURE GROUNDS

Michell's Golf Course Mixture

Composed of short-growing, deep-rooted varieties, resists plenty of wear. It retains its color well during the severest droughts. Golf courses to retain their permanency should receive additional sowings during the season. Sow 6 bushels per acre.

Prices: Qt., 20c.; 2 qts., 35c.; 4 qts., 60c.; 1 peck, \$1.00; 1 bu. (15 lbs.), \$3.00; 5 bu., \$14.50; 10 bu., \$27.50; 25 bu., \$65.00.

Michell's Putting Greens Mixture

While many greens keepers prefer to make their own mixtures for this purpose, there are some who rely on the ability and experience of the seedsman. Our formula for this has been reached after many extensive tests, and those who desire to sow it will not be disappointed in the results they get from it. It is a quick-growing mixture of short, thin-bladed grasses, over which the ball can roll without resistance. In sowing Putting Greens it is wise economy to be very liberal with the seed, as these places are subjected to hard use. We do not recommend less than 1 bushel of 20 lbs. (and more is better) to a green 75 foot square.

MICHELL'S RECLEANED GRASS SEEDS

August and September are ideal months to sow Grass Seeds

Michell's Permanent Pasture Grass Seed. In the past few years ideas of what was the best way to establish a permanent grazing sod have undergone many changes. The then prevalent method of sowing timothy and clover has been found not only costly but too short-lived to answer the purpose. The old custom has given way to the new, which is the sowing of a mixture of permanent grasses. Michell's Permanent Pasture Grass Seed is composed of about 10 of the best growing and most nutritious grasses and clovers for stock feeding or grazing. One sowing will last many years, although we advise additional sowings each autumn, just previous to which a light harrowing is recommended to give the grass a quick hold. Sow 3 to 4 bushels per acre on new lands or 2 bushels on established pastures (15 lbs. per bushel). Prices: Per qt., 20c.; 4 qts., 50c.; peck, 85c.; bush. (15 lbs.), \$3.00; 5 bush., \$13.75; 10 bush., \$26.00; 25 bush., \$62.50; 50 bush., \$120.00.

Michell's Permanent Hayfield Grass Seed. While timothy is still extensively sown for this purpose, this mixture is gradually being adopted by the progressive farmer. Its main advantages are that certain grasses in the mixture will grow better in varying conditions of soil, thus giving a full crop of hay on land that otherwise might produce but a half crop of timothy and clover. Our formula is the outcome of thorough trials in every kind of soil. Sow 3 to 4 bushels per acre on new lands, or 2 bushels on established fields (15 lbs. per bushel). Prices: Per qt., 20c., 4 qts. 50c., peck 85c., bush. (15 lbs.) \$3.25, 5 bush. \$14.00, 10 bush. \$27.00, 25 bush. \$65.00, 50 bush. \$125.00.

White Clover. Choicest recleaned for sowing on lawns, pastures, etc. Sow 10 to 12 lbs. per acre (60 lbs. per bu.). ¼ lb., 15c.; 50c. lb.; 5 lbs., \$2.40; \$4.50 for 10 lbs.; bu. (60 lbs.), \$24.00; \$40.00 per 100 lbs.

MICHELL'S RECLEANED FARM SEEDS

In ordering Farm Seeds, always allow 22 cents for each 2-bushel bag. These are returnable at the price charged.

Cutting Alfalfa on the farm of R. Mason Lisle, Paoli, Pa.

RECLEANED ALFALFA

Now is the time to sow.

Sow $\frac{1}{2}$ bushel per acre in May or during August and early September, top dress it with manure every fall, and it will rarely winter kill. It can be cut usually three times in one season. The great secret in getting a successful stand of Alfalfa lies in the preparation of the ground; it will pay everyone to give the ground preparation most intelligent thought. An Alfalfa field properly started will yield successfully a score of years. 25c. per lb. Write for price on larger quantity. Ask for Pamphlet on Alfalfa, mailed free.

CLOVERS

Alsike or Swedish Clover. The hardiest clover in cultivation. Particularly valuable when sown for mingling with other hay crops. One sowing lasts many years. Sow 10 lbs. per acre alone or 6 lbs. where sown with other crops. Sow from April to June and in the late summer and autumn. Height, 1 to 3 feet. Price, 25c. lb. Write for price on larger quantity.

Bokhara Clover. A tall, quick growing variety, principally used for providing food for bees. Sow early in April; 15 lbs. per acre. Height, 3 to 5 feet. Price, 30c. per lb.; per 10 lbs., \$2.50.

Crimson Clover (*Delaware grown*). Far superior to imported. The latter is not well able to withstand our winters. Used for soiling or green manuring, is also relished by cattle. Sow 20 lbs. per acre, from May until middle of October. Height, about 18 inches. 15c. lb. Write for price on larger quantity.

Red Clover (*Medium*). Principally sown for hay purposes on timothy fields early in the spring and fall. Sow 20 lbs. per acre if alone or 15 lbs. where other grass or hay crops are standing, in the spring and in late summer and autumn. Height, about 18 to 24 ins. Price, 25c. lb. Write for prices on larger quantity.

Mammoth Red Clover (*Pea Vine Clover*). Similar to the above but it grows larger and remains established longer. Sow from March 15th to May 1st and in the late summer and autumn; 15 lbs. per acre if sown alone or 10 lbs. if sown with another hay or grass crop. Price, 25c. lb. Write for price on larger quantity.

Sweet Clover (*Melilotus Alba*) for inoculating ground prior to sowing alfalfa or as a forage crop; this is a wonderful producer. Sow 15 lbs. per acre. 30c. lb.; 10 lbs., \$2.50.

White Dutch or Lawn Clover (*Fancy Recleaned*). For use on pasture lands it is extremely valuable. Sow 10 to 12 lbs. per acre on land seeded with grass or other grain from April 1st to September 1st. Price, 50c. (by mail, 58c.) per lb.; 5 lbs., \$2.40; 10 lbs., \$4.50; 1 bushel (60 lbs.), \$24.00; 100 lbs., \$40.00.

FARMOGERM (Nitrogen Bacteria)

Those desiring maximum crops, should inoculate their clovers before sowing with Farmogerm, particularly Alfalfa. It is easily applied, and will return its cost many times. Clovers inoculated with Farmogerm are capable of gathering as high as the equivalent of one ton of nitrates per acre from the air. Descriptive circular free. Price of Farmogerm, $\frac{1}{4}$ acre bottles, 50c.; \$2.00 one acre bottle, 5 acre bottle, \$9.00; \$17.50 per 10 acre bottle.

WINTER RYE

Penna. Large White. Sow 1 to $1\frac{1}{2}$ bushels per acre during fall. An excellent green food in spring, and may be used for turning under or harvesting. 10c. qt.; peck, 40c.; \$1.35 per bu.

RECLEANED TIMOTHY

Our stock is of very best quality; for sowing among wheat as a second-year hay crop or for sowing alone for a first-year hay crop this is extensively used. Sow $\frac{1}{2}$ bu. per acre alone or 6 to 8 qts. with wheat. 15c. lb. Write for price on larger quantity.

WINTER VETCH (*Vicia Villosa*)

True Sand or Hairy Vetch

Extensively used as a soil renovator or for dry or green feed in the early spring. It may be sown alone or with Winter Rye or Oats; is perfectly hardy, thriving under most adverse conditions. Is very nutritious, and live stock relish it. When sown with rye, etc., it will attain a height of 4 to 5 feet; sow $\frac{1}{2}$ bushel an acre broadcast alone or with other crops. Sow early in the fall or summer, and get a good growth before cold weather sets in. 60 lbs. per bu. 12c. per lb., larger quantity price on application.

SOJA BEANS

For green manuring, fodder and silo purposes.

Mammoth Yellow, Hollybrook, Ito San, and Wilson varieties. Prices on application.

MILLET

This is a very important emergency crop when the season for hay has been unsatisfactory. Can be sown as late as July 15th. **Tennessee, German or Golden.** Produces a fine quality of hay and makes a large seed-head. In good seasons it grows about 4 feet high. 15c. qt.; peck, 75c.; \$2.40 bushel (48 lbs.).

Hungarian. Not so fine in quality as the "German." It can, however, be sown 2 weeks later. 15c. qt.; peck, 50c.; \$1.40 bushel (48 lbs.).

Japanese Barnyard. Sow 12 lbs. per acre broadcast. 10c. per lb.; 10 lbs., 90c.; \$8.00 per 100 lbs.

WINTER WHEAT (Ready about September 10th)

Sow $1\frac{1}{2}$ to 2 bushels per acre except where noted.

ALLIUM Neapolitanum Ready in August

Used exclusively for indoor culture in pots and pans. It is especially adapted to forcing and makes an excellent cut flower; color pure white. Height, 12 inches. It is not hardy, so cannot be planted outdoors. Dozen and 100 lots mailed free. Each, 2c.; 15c. per doz.; per 100, 90c.; \$7.00 per 1000.

White Calla Lily

CALLA LILY BULBS

Ready in August

Callas require good, rich soil and plenty of warmth and water to make them thrive. The White Calla may also be grown in water. The black variety does not require so much moisture. When through flowering the pots may be laid on their side to allow the tops of bulb to die off. The plant may thus be used another season. Plant Callas indoors only.

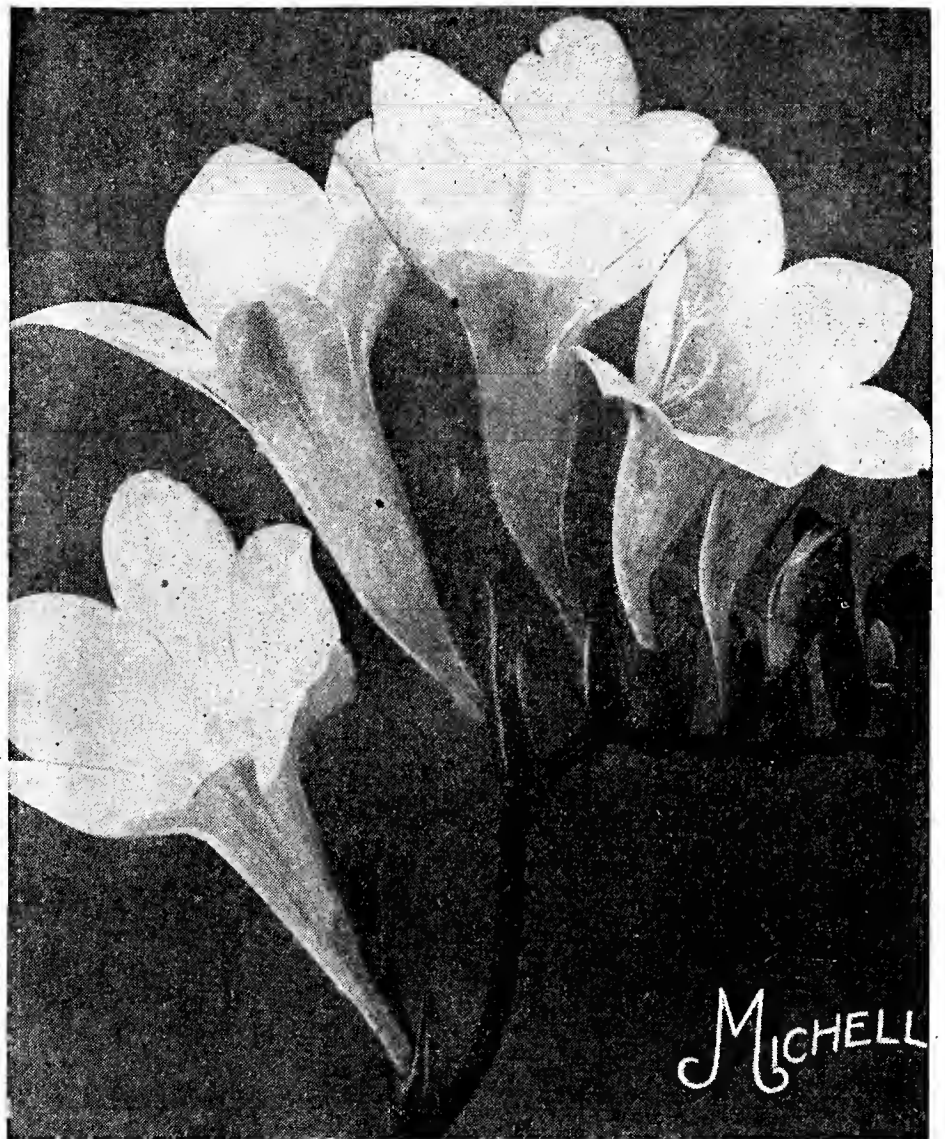

GODFREY DWARF EVERBLOOMING CALLA (New)

This comparatively new calla has proven an excellent one, its character is exactly like the Aethiopica or regular variety, except it is of much dwarfer habit and freer bloomer; very desirable as a pot plant, and will, we believe, be very popular in a short while. Large blooming size bulbs, 25c. each; doz., \$2.50; \$15.00 per 100.

FREESIAS (Ready in July)

Fischer's Strain Purity. This is the grandest freesia ever offered. The flowers are almost twice the size of the regular type; they also differ somewhat, being a pure glistening white; the stems are often 15 inches long and very wiry, rendering it a most valuable cut flower. Each bulb will produce 3 or 4 flower stems.

MICHELL'S EARLY ROMAN HYACINTHS

(Ready in August)

French Roman Hyacinths afford a continuous supply of bloom from early winter until late in spring if planted in succession (two weeks apart). They are very fragrant. The blooms are suitable for most any kind of cut-flower work; they also look very attractive if planted in boxes or pots and used for window decoration.

They are easily grown in pots or pans. The bulbs, if potted in August or September, the pots plunged in the open ground for a month, until the bulbs are well rooted, and then brought in the house, they can be had in flower in November or December, and a continuous supply of these delightful flowers may be had, by bringing in a few pots or pans of the rooted bulbs at intervals of about 2 weeks. The bulbs should be planted quite close together, a 6-inch pot or pan will be sufficiently large enough for six bulbs. They are not hardy and are not suitable for outdoor planting.

Michell's Monster White Roman Hyacinths

MICHELL'S EARLY NARCISSI (Ready in August) Polyanthus Type

This class of Narcissus is a most interesting one. They may be grown in water and pebbles like Chinese Lilies, but they are equally suited for growing in soil. Not suitable for outdoor planting.

Paper White Grandiflora, First Size Bulbs. This is quite a specialty with us; of it alone we import over one million bulbs. It is a pure white flowering sort; used extensively for forcing as it can be brought into bloom in 8 weeks' time; the stems are very long and it is excellent for bunching. 4c. each; per doz., 25c.; \$1.50 per 100; per 1000, \$14.00.

Paper White Grandiflora, Mammoth Bulbs. 5c. each; per doz., 40c.; \$2.00 per 100; per 1000, \$17.50.

Double Roman. White perianth, with an orange and yellow suffused cup; very free-flowering and early. 4c. each; per doz., 30c.; \$1.50 per 100; per 1000, \$12.00.

Grand Soleil d'Or. Rich yellow, with deep red cup. For cutting this is a fine variety, as it makes a grand show. 5c. each; per doz., 40c.; \$2.50 per 100; per 1000, \$20.00.

If wanted by mail, allow 10c. per doz. for postage on any of the above varieties.

Single Narcissus FRENCH TRUMPET MAJOR

Ready about August 15th

A beautiful early flowering yellow variety. These are received by us about August 15th, fully a month earlier than the Dutch Narcissus. They force easily; can be had in flower without any trouble for Christmas. They are extremely desirable and should be planted extensively, as they are earlier than any other trumpet sort.

MICHELL'S "SUPERB" EASTER LILY BULBS

LILIUM HARRISII (The Bermuda Easter Lily)

Cultural Note—In order to obtain best results, attention to the following brief directions will assist materially: Upon receiving the bulbs, pot them immediately. Place a handful of well-rotted cow manure in the bottom of the pot and place the bulb directly on top, covering it with soil. After watering, place in an outside pit and protect from the direct rays of the sun; cover well with soil, ashes or any other suitable litter. When the bulbs have become thoroughly rooted, bring inside, in a temperature of about 60°; let the plants grow slowly under a bench or some other suitable place until about 6 inches high; then place on top of the bench. About two months before Easter they can be brought into a warmer temperature and gradually forced into flower and height at one time. An occasional application of liquid cow manure, starting about six weeks before flowering time, will stimulate the plant wonderfully. *Thorough rooting is the most essential point.*

JAPANESE EASTER LILIES

Upon arrival of bulbs plant at once in suitable size pots, using coarse soft-coal ashes for drainage in the bottom, giving them a soil composed of sandy loam and well enriched with about 1/3 well-rotted horse or cow manure.

Put them in a protected place, soak down with water very heavy, and after two or three days cover the pots with 2 or 3 inches of ashes.

Place lilies where they are to bloom after January 1st, giving them a temperature, as near as possible, of 60° night and 70° day for about 10 days, then 70° night and 80° day until buds can all be counted.

During this period manure-water them regularly once a week with the following liquid: 1 bushel cow manure (fresh), and one 4-in. pot full of nitrate of soda to each 50 gallons of water.

Spray the foliage once a day (twice a day when clear weather). It is also very important to never allow the soil to get very dry, and never feed unless the soil is moist.

When the buds can be counted easily, move plants where you can get the temperature down gradually, and finally mulch them with either a little sheep manure or bone-flour.

MICHELL'S RELIABLE BULBS

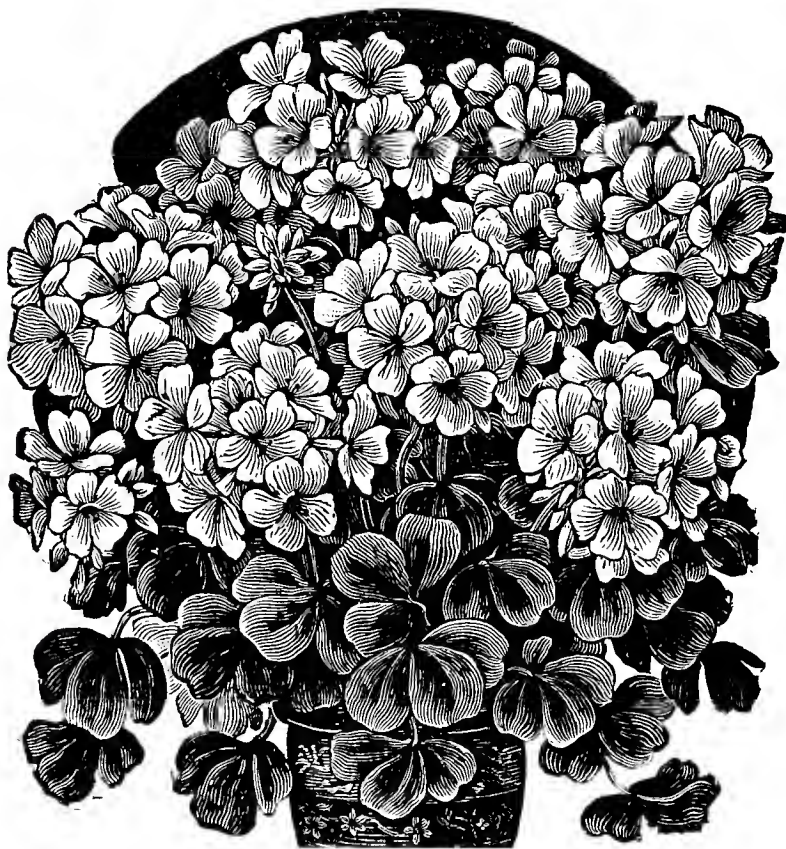

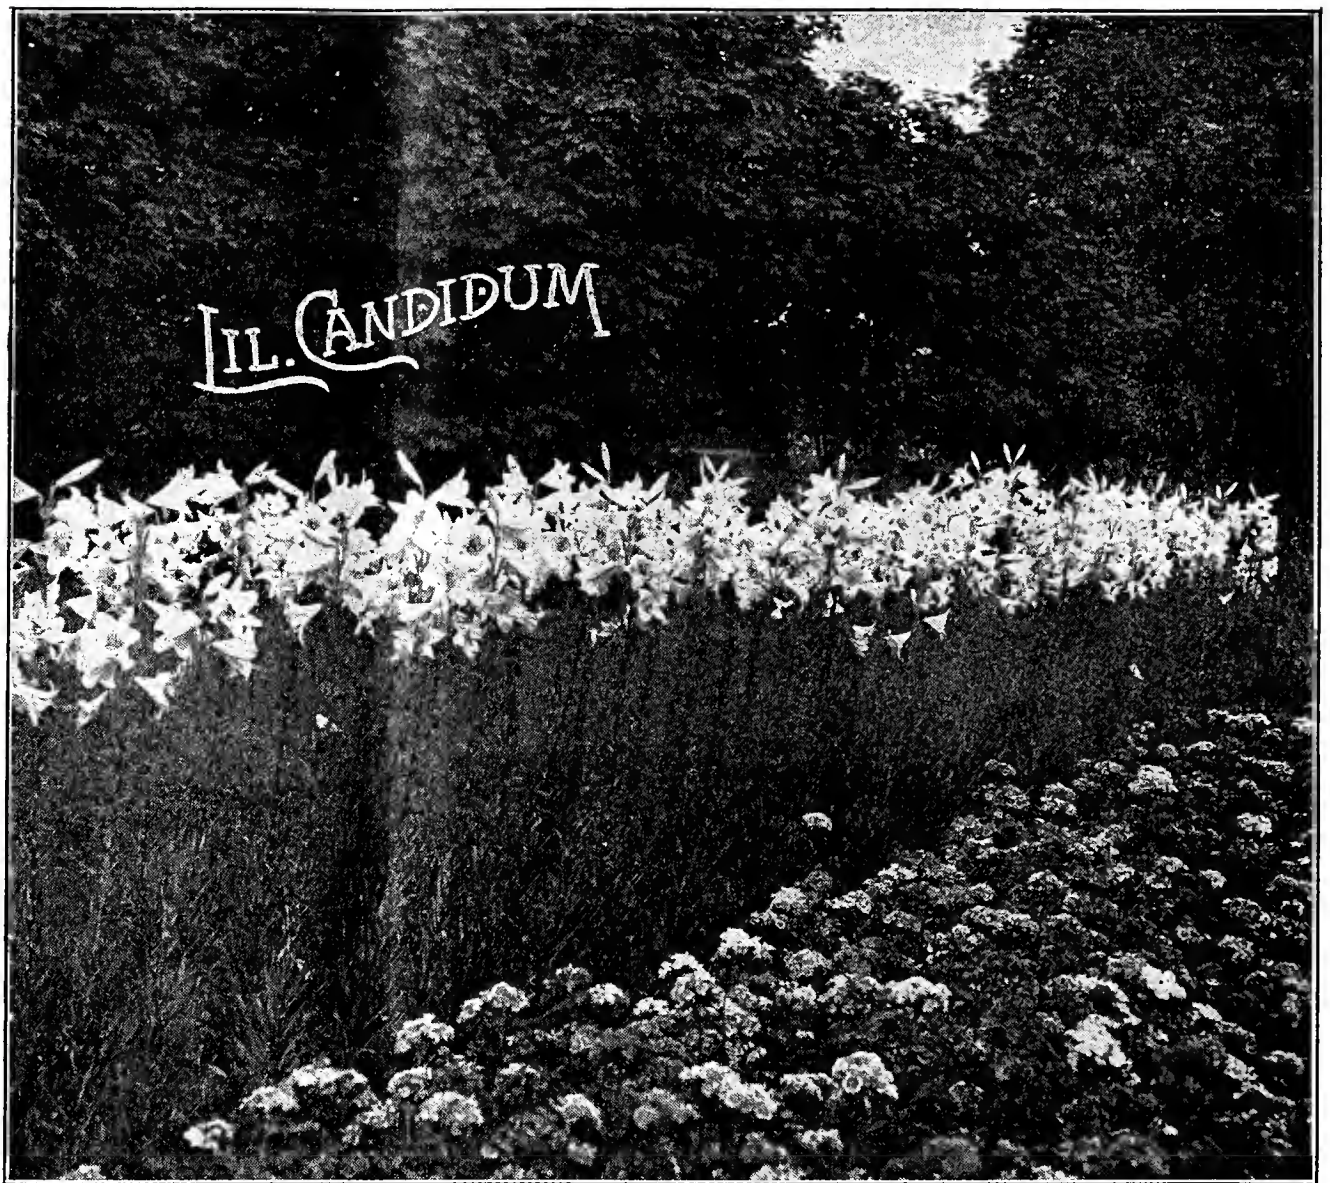

LILIUM CANDIDUM

(Ready in August)

This variety is sometimes called St. Joseph's, Madonna, or Annunciation Lily. One of the most popular and satisfactory of the American garden lilies. Pure waxy white flowers produced on straight stems bearing anywhere from 10 to 30 blooms of good size and substance; delightfully fragrant. Effective plantings are the result of massing them in clumps or borders. Our bulbs are grown in Northern France, where they have a reputation of growing the finest in the world. To insure absolute success, plant the bulbs as early as possible—September preferred—6 inches deep imbedded in sand and placed on their side; height, 4 feet; blooms in June.

Every gardener at odd times requires this exquisite flower for table decorations or other occasions. Our stock is the best procurable, and can be supplied at any time during the entire year in lots of not less than 100. They can be brought into flower in from 25 to 30 days with little or no trouble.

Michell's Giant Flowering Strain. \$3.50 per 100; 250 for \$8.50.

TESTIMONIAL FROM JAPAN

The bulbs arrived here this morning per parcel post. They were all in perfect condition. Let me express my thanks for the careful execution of my order.

Yours truly,

F. OYAMA,
47 Fushi Midai,
Dairen.

PENNA. LAWN CLEANER AND RAKE

There is no equipment that can take the place of this indispensable apparatus; the name "comb and brush for the lawn" has often been applied to it. The flexible rake bars are of wood, with steel springs and teeth; they rotate just like a lawn mower cylinder, and clean up every particle of leaves, mown grass, litter or rubbish, throwing it into a receptacle or bag in the rear, which is of large capacity. This can be detached and emptied at will.

**BAGS FOR PROTECTING GRAPES**

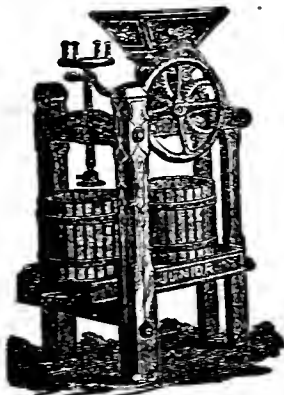

Grape growers will find after once using that these bags are indispensable: they keep the fruit clean, and free from insects, at the same time allow it to ripen freely. Grapes in bags sometimes keep until very late in the autumn on the vines.

If put on during the period when grapes are forming, they will save many times their cost in the amount of fruit they will rescue from insects, rot, etc. All ready with fasteners to attach.

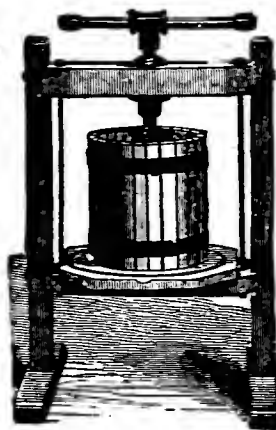

If desired by mail please add to the prices below as noted.

A Weed Killer For Use On Lawns

THE NEW WAY

CLIMAX LAWN SAND

Showing method of applying Climax Lawn Sand for destroying weeds in lawns.

"Climax Lawn Sand" is a unique combination of finely ground chemicals, which, when sprinkled over the grass, possess the remarkable property of destroying Moss, Chickweed, Plantains, Dandelions and all other weeds on Lawns, Tennis Courts, Golf Greens, etc., at the same time promoting the growth of the finer grasses.

"Climax Lawn Sand" may be applied any time during the growing season of the year, namely, from beginning of April to the end of October.

The lawn must be absolutely dry; by that is meant that no rain or dew must be visible on the grass.

Ten to twelve a. m. during the months of April, May and October, nine to twelve a. m. during June, July, August and September.

Only apply in fine weather when the temperature is fairly high and when no rain appears likely for a day or two. This is most important.

After applying, the weeds blacken and die; the grass usually also becomes blackened and may remain so for a few days, but it quickly recovers its color, and young growths appear on the bare spots previously occupied by the weeds.

Should the weather be very hot and dry, the lawn should be thoroughly watered at the expiration of 48 hours after the application.

It acts as one of the most powerful fertilizers for grasses if applied as a top-dressing in the early spring. For top dressing as a fertilizer apply $\frac{1}{4}$ ton per acre.

MICHELL'S TARGET BRAND WEED KILLER

Liquid Weed Killer can effectively be distributed with a watering can or in a sprinkling wagon.

An effective combination of high-grade chemicals which, diluted in water at 1 to 50, destroys the roots as well as the tops of all weeds and vegetation to which it is applied.

One gallon diluted is sufficient to cover 100 to 150 square yards; and one or two applications are sufficient for an entire season. Does not injure marble, cement or fencing. The best time for applying is just after a rain.
